

# LINX

VEHICLE ACCESSORY INTERFACE

## OPERATION GUIDE

LX100 Vehicle Accessory Interface Kit | 22.01.18

---

# WHAT IS LINX?

# WHAT IS LINX?

---

LINX is a sleek touchscreen interface that enables total control of both new and existing 4X4 Accessories. Gone are the days where the only option for installing aftermarket switches meant drilling multiple holes into the dashboard.

## INTRODUCING TOTAL CONTROL

LINX is a unique modern controller that declutters the dashboard and centralises the command of vehicle accessories by replacing classic switches, gauges and monitors with one sleek and smart driver interface. Built on an expandable platform, LINX will continue to evolve your on and off road driving experience both now and into the future.

The mobile touchscreen display integrates seamlessly into the vehicle cabin and mounts to a magnetic gimbal that's installed within easy reach of the driver. This connects to the LINX Controller which is the brains behind the system, and is conveniently installed out-of-sight either underneath the dash or the seat.

### STAY IN THE LOOP

# KIT CONTENTS

Each and every component to get your new LINX up and running.

[BACK TO TABLE OF CONTENTS](#)

# WHAT'S IN THE BOX?

Congratulations on the purchase of your brand new LINX. Inside the box, you'll find each of the components required to get the system up and running for your next 4x4 adventure.

## NOTES

- The **LINX DISPLAY 02** was specifically designed to withstand the extremes of heat and cold. It has a metal coupling on the back to connect it to the magnets on the Display Gimbal Mount **03**.
- The **LINX CONTROLLER 01** and **WIRING LOOMS 05** are normally mounted under the dash, however this may vary depending on the vehicle.
- The **DIN RAIL 06** comes assembled to the back of the **LINX CONTROLLER 01** and is used for securing the unit.
- The USB connection can be used to power and charge the LINX Display, and provide the communications channel between the LINX Controller and LINX Display.

---

# OVERVIEW

**Out of the box, LINX offers total control of six pre-installed modules: Front & Rear Traction, Compressor & Pressure Control, Battery Monitoring, Speedometer, Air Suspension Control and an Accessory Switchboard.**

[BACK TO TABLE OF CONTENTS](#)

# COMPATIBLE ARB ACCESSORIES

There's a range of ARB accessories that can be controlled and monitored by LINX.

## ARB DRIVING LIGHTS

ARB offers a large range of LED, HID and Halogen driving lights and light bars to suit your every driving need. Designed to perform in the most extreme conditions, they'll keep the road ahead brightly lit and the rear visible wherever you go.

## AIR LOCKERS

Designed and manufactured in Australia, ARB Air Lockers will enhance the traction of your 4x4 in just about any terrain, whether it's rock, clay, gravel, sand, snow or mud.

## ARB DUAL BATTERY SYSTEMS

Allowing you to power additional accessories without the risk of flattening the main battery, a Dual Battery System also provides peace of mind in the event of a main battery failure.

## ARB AIR COMPRESSORS

ARB Air Compressors provide many advantages; including inflating tyres and camping accessories, running air tools, activating Air Lockers and even re-seating a tyre onto a wheel.

# OPTIONAL ACCESSORIES

A range of products are available to complement the LINX Vehicle Accessory Interface.

Please refer to the Installation Guide or your nearest ARB Store or Stockist for further information.

FIND YOUR NEAREST STORE

## VEHICLE SPECIFIC MOUNTS

---

### A-PILLAR BRACKET

LINX A-Pillar brackets are available for a wide range of vehicles and models.

# OPTIONAL ACCESSORIES

## PRESSURE CONTROL KIT

Offering 'set & forget' simplicity to tyre inflation as well as remote control over your airbag suspension, the optional LINX Pressure Control Kit (coupled with an ARB air compressor) allows you to take full advantage of LINX's Pressure Control Module.

## RELAY KIT

Used for connecting LINX wiring harnesses.

## AIR SUSPENSION ISOLATION KIT

Adding an Air Suspension Isolation Kit allows owners with air suspension to take full advantage of LINX's Air Suspension Module, providing the ability to independently adjust the pressure and ride height in each air bag.

## TERMINAL KIT

Used for connecting LINX wiring harnesses.

---

# INITIAL SETUP

It's time to get your LINX device up and running!

[BACK TO TABLE OF CONTENTS](#)

# SETTING UP YOUR LINX

**Depending on the vehicle and accessories to be installed, the fitting process can take a few hours and is best performed by a trained ARB Technician.**

The time taken to connect and configure accessories such as compressor, Air Lockers and driving lights will vary depending on whether the accessory was fitted before or after your next LINX installation. LINX is fully customisable to suit your vehicle, please contact your local ARB distributor to discuss your individual requirements and provide a quote for your installation.

## LINX SETUP PROCESS

- Mounting of the **LINX CONTROLLER**.
- Connection of the 4 input wires from ignition, high and low beam headlamps and reverse lamp to the **LINX CONTROLLER**.
- Connection of the power loom to the **LINX CONTROLLER**.
- Installation of the **LINX DISPLAY GIMBAL MOUNT** and/or optional vehicle specific mount bracket.
- Connection of the **USB CABLE** from the **LINX DISPLAY** to optional USB power source or the **LINX CONTROLLER**.
- Checking and downloading any available modules and latest software updates.

# GETTING STARTED

The LINX Display receives power from the Controller via the USB Charge Cable provided.

The Display's on-board battery will take around 1 hour to fully charge from flat condition and provide approximately 4 hours of non-connected run time. It is normal practice to leave the Display on all the time and connected when in the vehicle. When outside the vehicle, the Display communicates with the Controller via a Bluetooth connection up to 10m away.

## CONNECTING THE USB CABLE

**The USB connection can be used to power and charge the LINX Display, and provide the communications channel between the LINX Controller and LINX Display.**

The provided USB cable, 7450104, has a USB A connector at one end for connection to the LINX Controller, and a USB micro B (back angled) connector at the other end for connection to the LINX Display.

The USB cable should be secured to the LINX Controller using a cable tie as shown below. This prevents vibration or cable strain from damaging the USB connection.

**NOTE:**

The LINX Display can also be connected to an alternate USB power socket. In this case, the communications channel will be via Bluetooth only.

- USB cable
- Alternative USB power socket.

The USB A Port is located inside the Controller and is accessed by pressing and lifting the latched cover **05** at the front of the controller.

**Note:** If the LINX System has already been installed in your vehicle, simply connect the USB micro B connector on the cable to the Display.

## SWITCHING ON/OFF

To switch on the Display, press & hold the Power button **06** for approximately two (2) seconds.

With the unit powered on, you can increase or decrease the volume by pressing the Volume buttons **07**.

To switch off the Display, press & hold the Power button then select "Power Off" then "OK".

For more information on installing the LINX system and associated equipment on your vehicle, please refer to the "LINX Installation Guide" and your nearest ARB outlet.

## BLUETOOTH PAIRING THE DISPLAY WITH CONTROLLER

Access the **BLUETOOTH SETTINGS** by:

1. Open up the **APP DRAWER**

2. Tap **SETTINGS** and select **BLUETOOTH**

To pair with LINX:

1. Tap 'ARB LINX' from the available devices.

2. Once paired, the LINX Display screen should change to the main split screen view, and be displaying the vehicle's battery voltage

**NOTE:**

Once the Display and Controller have been Bluetooth paired, the LINX Controller will become invisible to all other devices.

---

# OPERATING LINX

Learn how to navigate your LINX device.

[BACK TO TABLE OF CONTENTS](#)

# LINX DISPLAY

The LINX Display is the user interface that enables the driver to access and customise the settings that control the 4X4 equipment installed on the vehicle and connected to the LINX Controller.

It uses a capacitive touch screen and is based on the Android 6.0 operating system. It has been designed to withstand the rigor of 4x4 driving including operating temperatures from -20°C to 80°C.

The Display supports USB, Bluetooth, WiFi and GPS connectivity and complies with FCC, CE and RCM certifications.

# HOME SCREEN

Upon start-up, the Display shows the ARB LINX Home Screen and then enters split screen display mode.

The Status Bar contains several icons positioned across the top of the display which indicate the status of the unit. Items which are active/on are bright. Items which are inactive/off are greyed out.

Settings that should remain on all the time include GPS (for Speedometer function to operate), Bluetooth (for Controller communications when the Display device is disconnected from the USB cable and is outside the vehicle) and WiFi as this is used by the Display to communicate with the internet during LINX updates.

## NOTES

- Select **RECENT 07** to display a list of recently selected Apps. Scroll up/down and tap an item to return to it. Select 'X' on the menu item to remove it from the list.
- Tap **APPS DRAWER 10** to display all Apps installed on your LINX Display.
- Tap **LINX HOME 08** to return to the LINX menu.
- Tap **BACK 09** to return to previous menu. (Tap and hold **L2** to save the current LINX module view as a Favourite). To retrieve it, tap **BACK 09** again.

# 08 MAIN MENU

The Main Icon Screen contains a list of the software modules installed on your LINX Display. It provides direct access to each of the Modules, the LINX Settings menu, LINX Module Activation and LINX System Information buttons.

**B LINX SETTINGS**

Select to customise the Display brightness, units, theme colour and to run a LINX update.

**C MODULE ACTIVATION**

Select to activate all modules on the device. Touch the arrow checkbox  to de-select options (Note: remember to scroll up to see any additional modules).

**A LINX MODULE**

Touch to select it.

**E CONNECTION STATUS**

Shows if Bluetooth or USB is connected.

**D LINX INFORMATION**

Shows the current installed version.

**D LINX Information screen**

**C Module Activation Screen**

## ACCESSING EACH MODULE

The Display device is supplied with pre-installed software modules. These provide access to modules like: Front and Rear Traction, Compressor System, accessory Switchboard (for Lights), Battery monitor, Speedometer and Air Suspension.

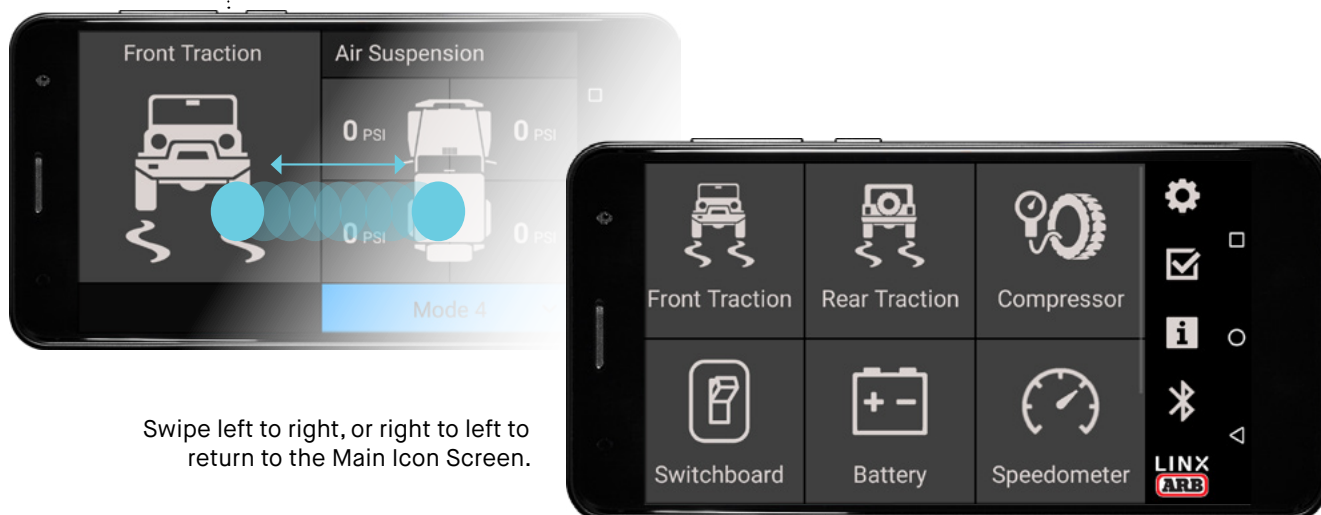

Scroll down or up to see which modules are installed.

When a module is selected, the Display automatically enters "split screen" mode (shown above). The screen is then divided into two columns. Each screen can then be scrolled vertically independent of the other.

## RETURNING TO MAIN ICON SCREEN

Access to the Main Icon Screen is gained by touching the ARB LINX Home Screen following power-up or swiping left or right when any other screen is active.

Swipe left to right, or right to left to return to the Main Icon Screen.

# SETTINGS MENUS

## QUICK SETTINGS MENU

Quick Settings is used to change frequently accessed items. With two fingers, Swipe down from the top of the screen to open the Quick Settings menu. To change a setting, simply touch the icon and select the options

## MAIN SETTINGS MENU

The Settings menu is used to control core Android settings.

To open, tap **SETTINGS** at the top right of the screen.

Swipe up or down to view setting options.

Touch an item to select it. Select **BACK** to return to the previous menu, or **HOME** to return to the LINX home screen.

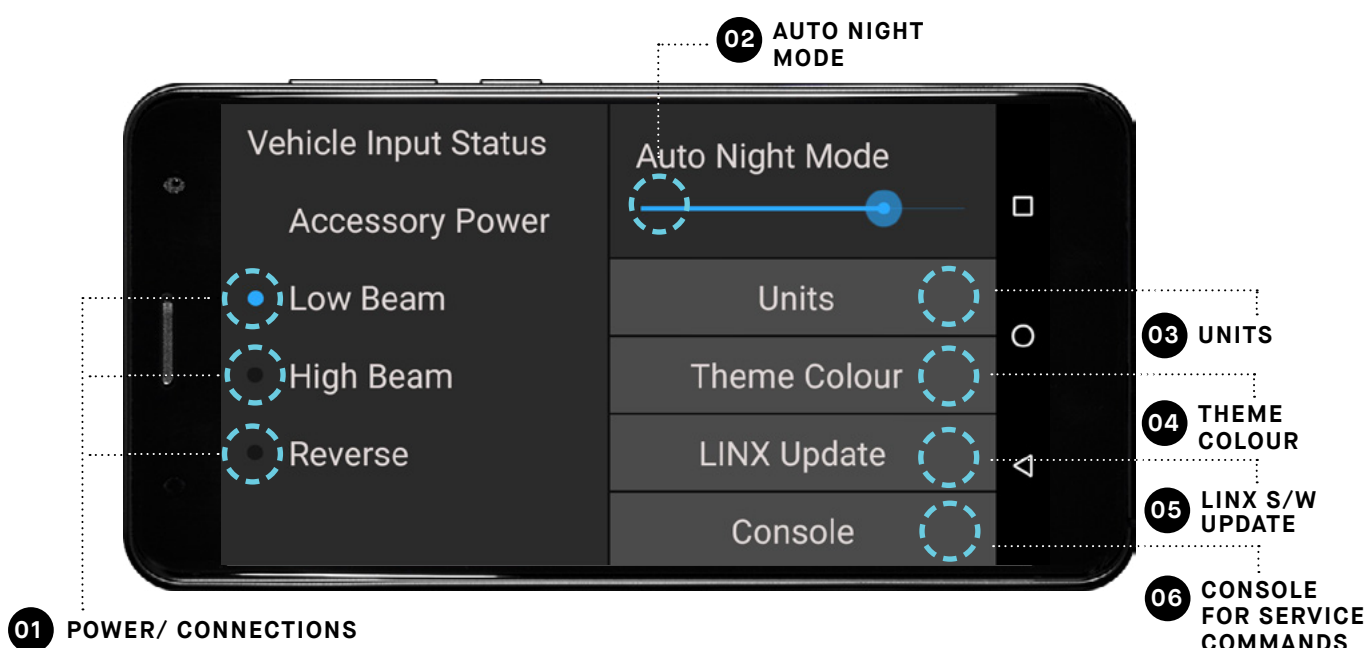

## LINX SETTINGS SCREEN

The LINX system's Auto Night Mode integrates with the vehicles headlights and enables the user to customise the display brightness for specific driving conditions. The units for speed, distance, temperature and pressure can also be set individually. The interface colour theme may be adjusted and a LINX software update can be run to ensure the system is running the latest version of LINX.

**Note:** Run a LINX Update when first installed.

UNITS DISPLAY

THEME COLOUR SCREEN

### NOTES

- The Vehicle Input Status area **01** will show a coloured "dot" next to activated input connections on the Controller.
- Use the slide control on Auto Night Mode **02** to customise the brightness level of the Display for a specific driving condition. eg For night driving you may want to switch your "Low Beam" lights on, then adjust the brightness down to a level you want active when the Low Beam lights are next in operation.
- Select Units **03** to bring up the units menu and tap the combination of units required.
- Choose the Theme Colour **04**. Press and drag or slide to match your vehicle's instrumentation colours.
- Run a LINX Update **05** to check if you have the latest software build and features on your device.
- Tap the Console button **06** to enter service commands.

# LINX INTERFACE & MENU NAVIGATION

The LINX system offers a Graphical User Interface (GUI) similar to that found on most smart phones and tablets.

In order to fast track your use of the LINX interface, please acquaint yourself with these basic methods of interacting with LINX.

**SINGLE TAP** a module to activate or de-activate it.

**DOUBLE TAP** a module to toggle between full / split screen display.

**PRESS & HOLD** a module to go to its Settings Menu.

**PRESS & HOLD** an underlined value or text to edit it.

**SWIPE DOWN** from the top of the screen with two fingers to access the Quick Settings menu.

**SWIPE LEFT/RIGHT** to return to the LINX main icon screen.

## BUTTON COLOUR STATUS

SELECTABLE  
(but not active)

SELECTABLE  
(and active)

DISABLED/  
NON-SELECTABLE

**AUTOMATION TRIANGLE**  
on a button indicates a LINX automated state of the control.

**THEMED VALUES**  
(i.e. coloured item) is a real-time display.

## LINX DISPLAY SCREENS

**MAIN ICON SCREEN**

**SPLIT SCREEN**  
(INDEPENDENTLY SCROLL)

**FULL SCREEN**

**TEXT ENTRY**

**NUMERIC ENTRY**

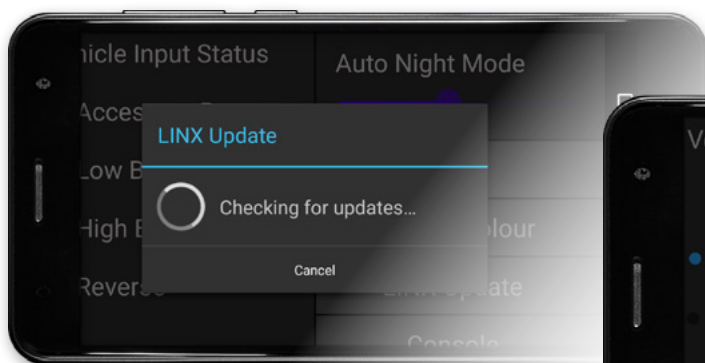

**INFORMATION SCREEN**

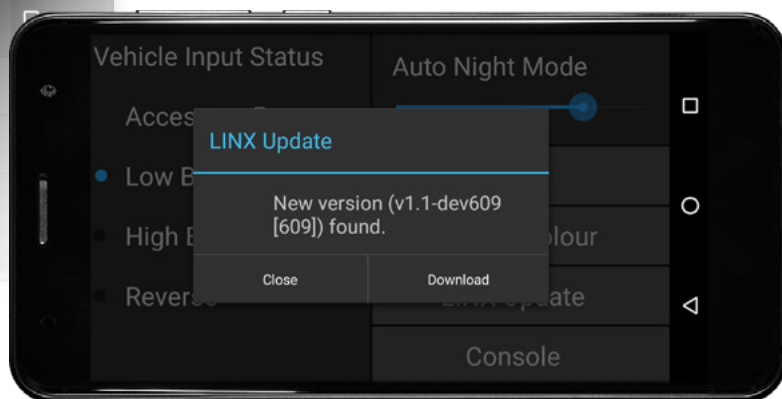

# UPDATING LINX

The LINX system can check for new updates whenever connected to the internet by pressing 'LINX Update.'

1. Option to update has automatically appeared on screen.

2. Upon selecting LINX UPDATE the screen will display:

If LINX has determined there is a new firmware update available, the following screen will display, giving you the option to update;

(Note: you can select to "Update Later", in the lower left corner of the screen, to run an update at a later time)

---

# MODULES OVERVIEW

When you're ready to hit the road, accessing each module using LINX is achieved with a simple swipe across the touchscreen display.

[BACK TO TABLE OF CONTENTS](#)

# FRONT AND REAR TRACTION MODULES

The LINX Front and Rear Traction modules are used to setup and control the Air Lockers installed on your vehicle and when selected will automatically activate the Compressor where required to engage them.

1. Double tapping the Front (or Rear) Traction icon brings up Full Screen mode for the Front and Rear Traction modules.

2. Now in "Full Screen" mode.

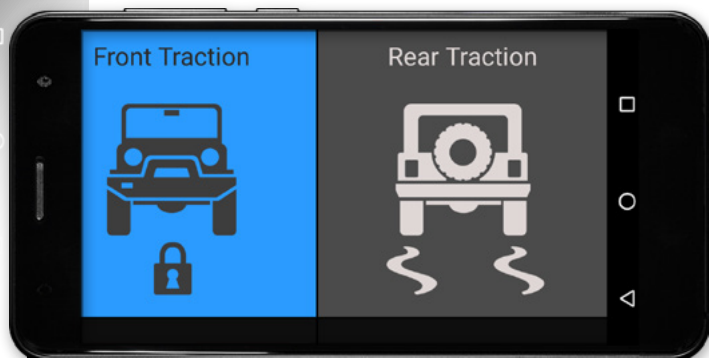

## ACTIVATING REAR TRACTION

To engage the Rear Locker, simply tap the icon once. Tap again to switch off the rear locker.

1. Single tap on **Rear Traction**

2. Rear Traction is now engaged/locked.

## ACTIVATING FRONT TRACTION

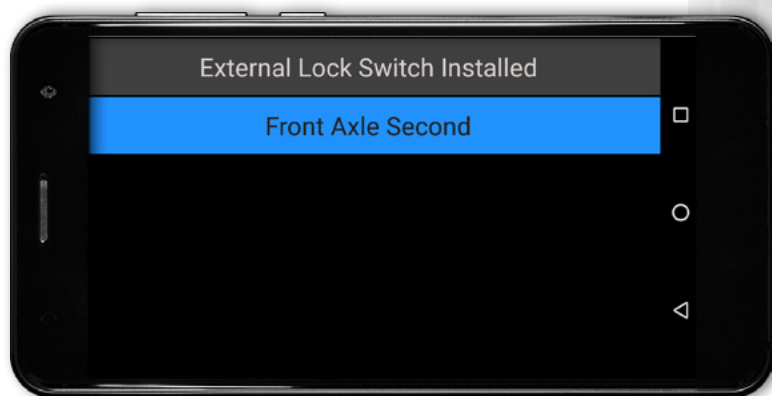

To enter settings for the Front Traction module tap and hold the icon, this will show the Front Traction options menu. Simply tap the option you wish to activate.

Tap again to switch off the option.

**1. Tap and hold  
Front Traction**

**2. Front Traction menu ('Front Axle Second')** is now selected.

## FRONT & REAR TRACTION MENU: AIR LOCKER SETUP

Using the LINX Front & Rear Traction menu options, the front Air Lockers can be setup to operate in two ways:

- A. Front Axle Second
- B. Front Independent of Rear

### A FRONT AXLE SECOND

The default state in which the LINX system is supplied. It automatically greys-out the Front Traction option making it un-selectable until the Rear Traction option is made active. This is a traditional safety feature that was factory hard wired in conventional installations.

**FRONT INDEPENDENT OF REAR** **B**

Available when Front Axle Second is de-selected allows the Front and/or Rear Air Lockers to be switched on or off independently of the other at any time.

**NOTES**

- De-select "Front Axle Second" to allow the Front Axle to engage when the Rear Traction is not already active.
- Enable the "External Lock Switch Installed" feature if you have a dashboard switch for your Air Locker and wish to use this instead of LINX to control the actuation of the Air Locker(s). The state of Lock / Unlock will still be shown by LINX

# COMPRESSOR MODULE

## AND OPTIONAL PRESSURE CONTROL MODULE

The LINX Compressor module is used to configure and operate your air compressor. "Pressure Control" is an optional upgrade that is used in conjunction with the LINX Pressure Control Kit (7450107) to inflate or deflate your tyres to a Target Pressure level.

### SWITCHING ON COMPRESSOR

To switch the Compressor on, tap the menu item once. Tap again to switch it off.

1. Single tap on **COMPRESSOR**.

2. **COMPRESSOR** highlighted indicates it is on.

### CONFIGURING COMPRESSOR MODULE

To configure the Compressor module press and hold the button this will show the Compressor options menu. Tap the option you wish to set. Tap again to unset it.

1. Press and hold **COMPRESSOR**.

2. **COMPRESSOR** menu ('Disable When Engine Off' set)

The blue automation triangle appears in the top right corner of the Compressor menu item to indicate that LINX has changed the status of the Compressor

**QUICK TIP:**

Tap "Disable When Engine OFF" to ensure that the Compressor will only run when the engine is on, this prevents any damage to the engine or blown fuses if the battery levels are too low to operate it.

**CONFIGURING PRESSURE CONTROL**

To activate the optional Pressure Control feature, tap the "Pressure Control Installed" button then set the "Maximum System Pressure" to set the upper limit that can be used when inflating your items.

This must be less than the minimum limit of your compressor's pressure switch (eg For an ARB CO35 100psi pressure switch set it to 65psi, for an ARB 180901 150psi pressure switch set it to 130 psi). Only operate the compressor with the engine running.

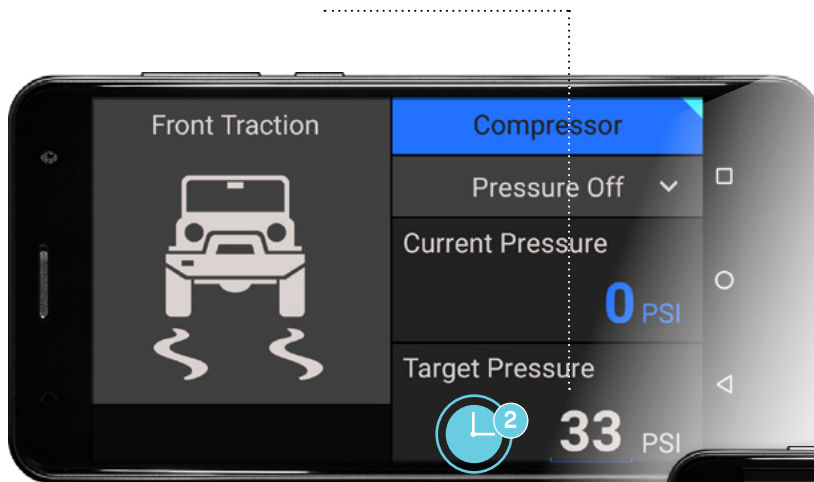

1. Tap **PRESSURE CONTROL INSTALLED**

2. Then set the **MAXIMUM SYSTEM PRESSURE**

Select **BACK** to return to the Compressor menu. The Display will show the "Current Pressure" in the system and user definable "Target Pressure".

1. To change the "Target Pressure" press & hold the underlined value "33" in the menu to bring up the keypad entry.

2. use the keypad to input the required value, then tap the tick to set it.

## PRESSURE CONTROL MODE LIST

Installing pressure control will activate a dropdown option to select between 3 different modes:

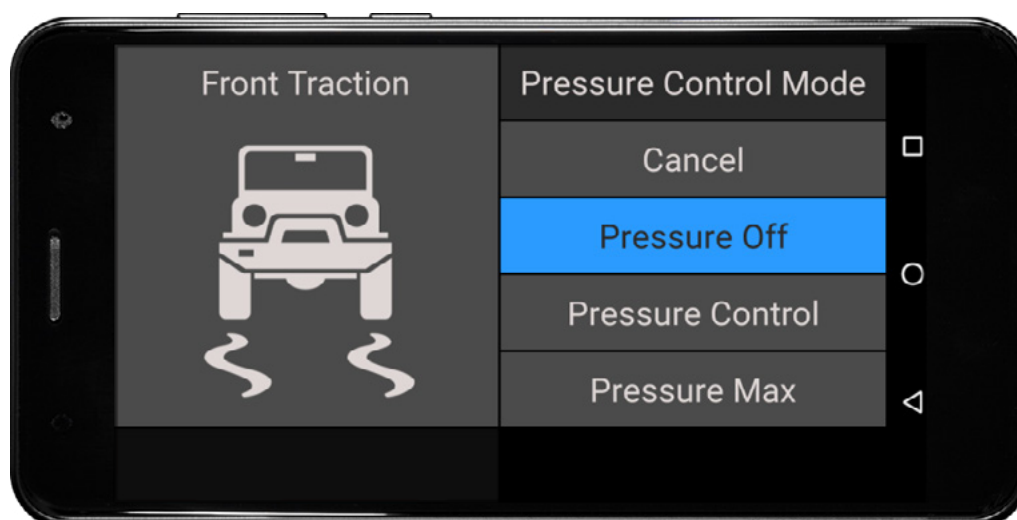

### FUNCTIONS

**PRESSURE OFF** means no air flow from the compressor, but residual pressure may still be in the air line.

**PRESSURE CONTROL** will activate the compressor with the Pressure Control Valve and try to inflate/deflate to achieve the set "Target Pressure" to a value less than or equal to the "Maximum System Pressure" set.

**PRESSURE MAX** will activate the compressor, bypassing the Pressure Control Valve, thereby opening up a straight connection between the air line and the compressor which is useful when using a blow gun on the air line.

**CANCEL** is used to back out of the menu (ie same as selecting the back button).

## NOTES

- Parameters that may be set by the user are shown underlined.
- Theme coloured parameters (eg "Current Pressure" value) are monitored by the system.
- The "Maximum System Pressure" will automatically override any Target Pressure entered in excess of it.
- "Current Pressure" is the pressure monitored by the system inside the LINX PRV.
- "Target Pressure" is the pressure that the user may set to either inflate or deflate their tyres.
- The Display Screen uses Bluetooth to communicate with the Controller and may be disconnected from the USB charge cable then removed from the mount and taken outside of the vehicle to monitor and control your tyre pressures dynamically at the side of your vehicle.

## WARNING

Tyre pressures vary by manufacturer, type, vehicle load, speed and driving conditions. Over inflating your tyres can lead to excessive tread wear and shorten their overall life expectancy. Please consult the tyre manufacturer for the appropriate pressure settings for your tyres and driving conditions. Always remember to reinflate your tyres to the correct pressure immediately upon returning to sealed roads. Failure to do so could seriously affect vehicle handling and possibly result in tyre failure

# SWITCHBOARD MODULE

The LINX Switchboard Module can be used to control up to six (6) optional switched accessories connected to your LINX Controller.

Each accessory can be given a unique name (up to 16 characters) and then be customised to switch on or off; by user input, by ignition, by high or low beam/parker headlamps or by reversing lamps.

They can also be turned off automatically when a user defined setting for low voltage cut out has been detected by LINX to protect your vehicle from a flat battery. All settings are saved back to the Controller and remain active 24/7 even if the Display is off or is removed from the vehicle.

## ENTERING SWITCHBOARD MENU

1. Tap **SWITCHBOARD**

2. The **SWITCHBOARD** menu appears on screen

## FULL SCREEN MODE

1. Double tap anywhere on the Switchboard menu to view in full screen.

## ENTERING ACCESSORY MENU FULL SCREEN MODE

1. Tap and hold **ACCESSORY 1** to view in full screen.

## RENAMING ACCESSORIES

To rename "Accessory 1" to suit your vehicle accessory setup:

1. Tap and hold the underlined text to show the keyboard.

2. Then, enter a name relating to its function and select 'DONE' when complete.

**EXAMPLE:** To setup your front flood or spot lights you could enter "INTENSITYS AR32"

## SYNCHRONISING ACCESSORIES

To automate the INTENSITYS to turn on or off with the vehicle's High Beams, simply tap the **HIGH BEAM** icon on the menu.

1. Select the High Beam icon on the menu

2. The icon will change colour when selected.

## LOW BATTERY PROTECTION

To assign "Low Battery Protection" to switch off the INTENSITYS based on Battery 1's set Low Voltage Alarm level:

1. Select "**BATTERY 1**" and the  tick box to enable it.

(Refer to the section on "Battery Monitor Module" for customising the battery settings and entering a Low Voltage Alarm level)

### NOTES

- In the example shown above, the "Low Battery Protection" on "Battery 1" will ensure that the INTENSITYS are switched off (even though your High Beam lamps are still switched on) once the battery level drops below the set limit.
- All automation functions are user over-ridable. In the example above, LINX will automate the INTENSITYS to come on whenever the high beams are activated, but the INTENSITYS can still be switched off by the user at any time.

# BATTERY MODULE

The LINX Battery Module can be used to monitor and display the charge state of up to three (3) independent batteries simultaneously.

Each battery can be given a unique name (up to 16 characters) and then be configured to operate with your Switchboard accessory via the Switchboard Module. (Refer to the section on "Switchboard Module" for further details).

## ENTERING THE BATTERY MENU

1. Tap **BATTERY**

2. The **BATTERY** menu will appear on screen.

### FULL SCREEN MODE

1. Double tap anywhere on the **BATTERY** menu to view in full screen.

### BATTERY SETTINGS MENU

1. Press and hold **BATTERY1** to view to enter the Battery settings menu

## RENAMING BATTERIES

To rename "Battery 1" to suit your vehicle accessory setup:

1. Press and hold the underlined text to show the keyboard.

2. Then, enter a name relating to its function, then select 'DONE'

**EXAMPLE:** To setup your main vehicle battery rename it to "MAIN BATTERY"

**NOTE:** The greyed-out tick indicates that the battery is connected to the Controller. Battery 1 is active by default and cannot be de-activated.

## LOW VOLTAGE ALARM LEVEL

To set the Low Voltage Alarm level:

1. Tap & hold the underlined value "11.2" in the menu to bring up the keypad entry.

2. Then, use the keypad to input the required value then select the tick to set it.

### NOTES

- Parameters that may be set by the user are shown underlined (eg "Low Voltage Alarm" value).
- Theme coloured parameters (eg battery level displayed as "12.1v") are monitored by the system.

## LOW VOLTAGE ALARM

A Low Voltage Alarm when triggered will highlight in RED. For example, Battery 2 (renamed to "AUX BATTERY") has its Low Voltage Alarm level set to "11.5V" and the batteries actual voltage is 11.4V which now highlights in RED

## NOTES

- The maximum setting for Low Voltage Alarm is 15.0V
- Parameters that may be set by the user are shown underlined (eg "Low Voltage Alarm" value).
- Theme coloured parameters (eg battery level displayed "12.3v") are displayed in real time.

# SPEEDOMETER MONITOR MODULE

The LINX Speedometer Module works by GPS (Global Positioning System) to show the current speed, altitude and bearing of your vehicle.

The Speedometer Module operates independently of tyre size or level of inflation of your tyres, thus providing better accuracy than an uncalibrated vehicle speedometer. The Speedometer Module enables the user to assign a speed limit such that a warning is issued if the limit is exceeded by the driver. Greyed-out values indicate poor GPS reception.

## ENTERING THE SPEEDOMETER MENU

1. Tap **SPEEDOMETER**

2. Access the **SPEEDOMETER** menu. The current Speed, Altitude and Bearing will be displayed on your screen.

### FULL SCREEN MODE

1. Double tap anywhere on the **SPEEDOMETER** menu to view in full screen.

### ACCESSING SPEED LIMIT WARNING MENU

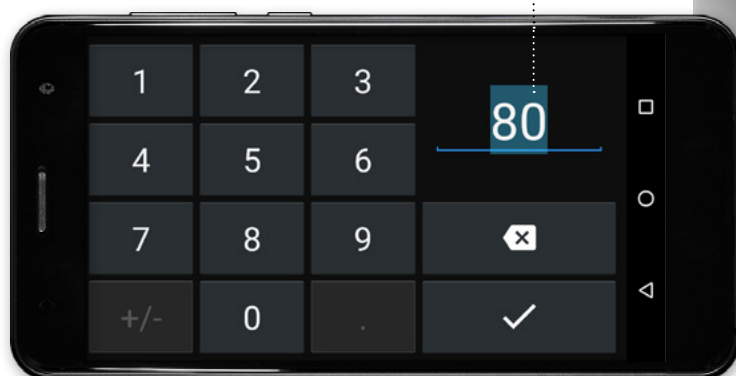

1. Press and hold anywhere on the **SPEED** display.

## SETTING SPEED LIMIT

To set the speed limit:

1. Press & hold the underlined value "0 km/h" in the menu to bring up the keypad entry.

2. Use the keypad to input the required value, then select the tick to set it.

## SPEED LIMIT WARNING

To enable the speed limit warning option:

1. Tick the box in the top right corner of the Speed Limit Warning menu.

2. Select the Back button to return to Speedometer "Full Screen" display.

LINX will now monitor the vehicles' speed and let the driver know when the limit has been exceeded by changing the displayed speed colour to RED.

### NOTES

- Parameters that may be set by the user are shown underlined (eg "Speed Limit Warning" value).
- Theme coloured parameters (eg Altitude, Bearing and Speed) are monitored by the system.
- The GPS in your LINX Display requires good outdoor signal reception from at least three satellites to pinpoint your location for accuracy of operation. Greyed-out values indicate no GPS reception and are not real time (eg When driving through a tunnel).

# AIR SUSPENSION MODULE

The LINX Air Suspension Module (when fitted with an optional compressor, airbags and LINX Pressure Control Kit (7450107) gives you the ability to control up to 4 airbags either as pairs to level the vehicle from front to rear, or independently to cater for uneven loads from one side to the other.

Independent air bag control requires the optional LINX Airbag Suspension Isolation Kit (7450109). The user can customise the pressure of the airbags then save these mode settings under unique names (up to 16 characters long) to suit different towing and vehicle load conditions then at the press of a button retrieve the settings suited for the day's journey. For example, your modes might be named "DAILY RIDE", "BOAT TRAILER", "CARAVAN" or "QUAD TRAILER" based on the vehicle loads or range of equipment you have to hook up to your vehicle.

## ENTERING THE AIR SUSPENSION MENU

1. Tap **AIR SUSPENSION**

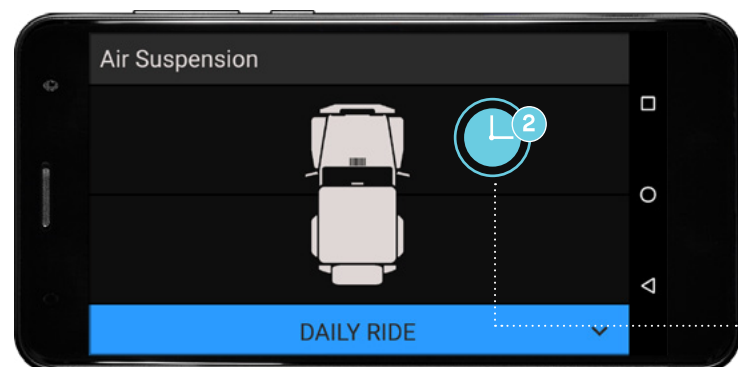

2. **AIR SUSPENSION** will appear on screen.

### FULL SCREEN MODE

1. Double tap anywhere on the **AIR SUSPENSION** menu to view in full screen.

### ACCESSING AIR SUSPENSION SETTINGS MENU

1. Press and hold anywhere on the display for **AIR SUSPENSION SETTINGS** menu.

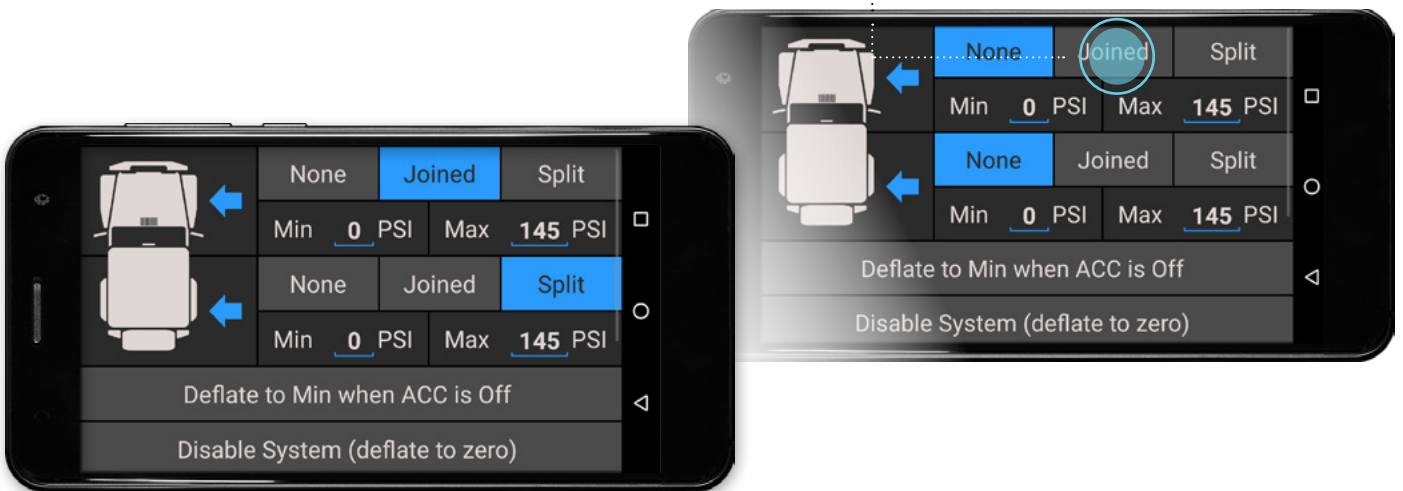

## AIRBAG OPTIONS

There are three options that can be set for the Front and/or Rear airbags as follows; A) Select "None" to leave the Air Suspension inactive, B) Select "Joined" to control them as pairs (eg to level the vehicle from Front to Rear), or C) Select "Split" to control each side of the vehicle independently of the other to compensate for uneven vehicle loads. The range of control options will be dependent on the hardware and LINX accessories you have configured on your vehicle. Please refer to your nearest ARB outlet for further information

### SET OPERATIONAL CONTROL STATE

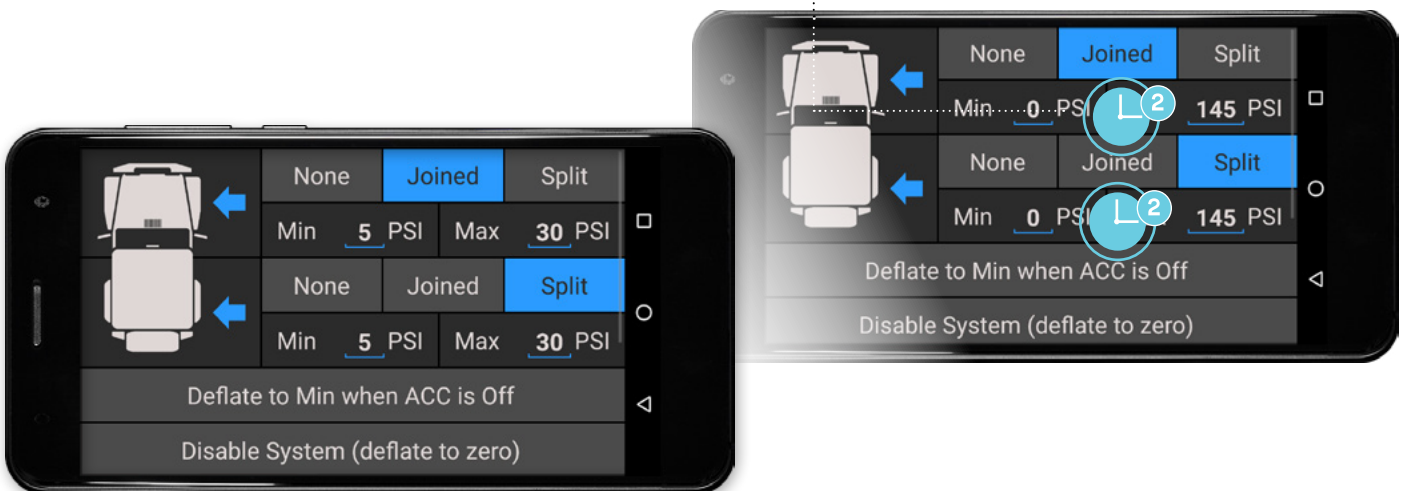

To set the Front and/or Rear airbags hardware configuration:

1. Single tap on "Joined" or "Split"

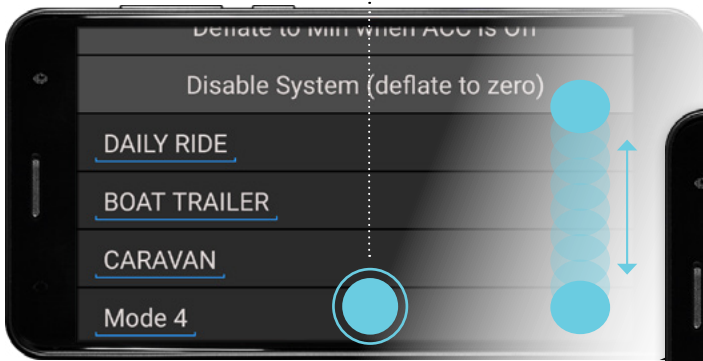

### SET MINIMUM AND MAXIMUM AIRBAG OPERATING PRESSURES

1. Press & hold on the underlined values.

## RENAMING SETTINGS

1. Scroll up, then press and hold "Mode 4"

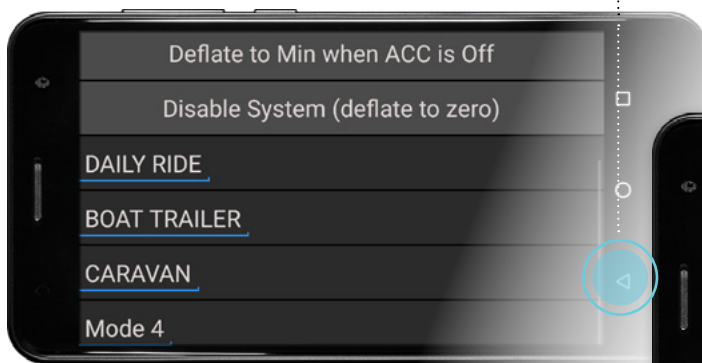

2. Change name as required, then press "DONE."

## RETURN TO AIR SUSPENSION MENU

1. Touch the **BACK** button.

2. The screen will return to Air Suspension "Full Screen" menu.

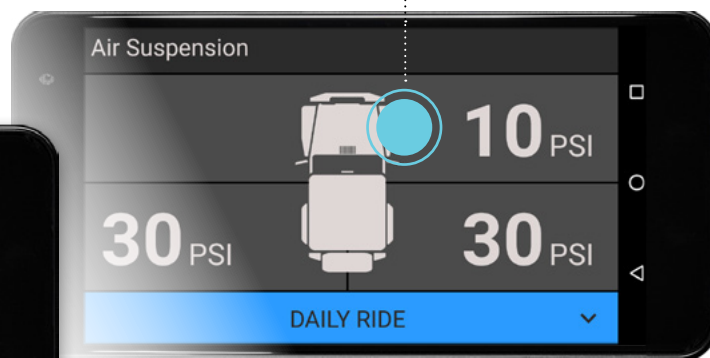

## ADJUSTING AIR PRESSURE

Tap the pressure value of one or more values requiring adjustment. Tap again to deselect them.

1. Tap near "10"

2. Tap "+" to increment and "-" to decrement the value.

### NOTES

- Parameters that may be set by the user are shown underlined (eg "Min", "Max" values and Mode names).
- Refer to your airbag manufacturer's datasheet for the recommended Min and Max operating pressures
- Disable System option is normally used by technicians when working on and installing the system.

## EUROPE - EU DECLARATION OF CONFORMITY

---

This declaration of conformity is issued under the sole responsibility of the manufacturer.

This declaration relates to these products:  
LINX 1.0

The products are in conformity with the following standards or standardized documents:

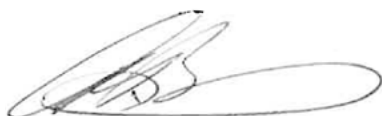

ETSI EN 301 489-17 V2.2.1:2012  
ETSI EN 301 489-1 V1.9.2:2011  
ETSI EN 300 328 V1.9.1:2015  
EN 60950-1:2006 + A11:2009 + A1:2010 + A12:2011 + A2:2013  
IEC 60950-1:2005 (Second Edition) + Am 1:2009 + Am 2:2013

According to the provisions of the directives:

1999/5/EC (Radio Equipment and Telecommunication Terminal Equipment Directive)  
2014/30/EU (Electromagnetic Compatibility Directive)  
2014/35/EU (Low Voltage Directive)

Technical file at:  
ARB Corporation Ltd, 42-44 Garden St, Kilsyth, Victoria, Australia

## USA - FCC STATEMENT

---

This device complies with part 15 of the FCC Rules. Operation is subject to the following two conditions: (1) this device may not cause harmful interference, and (2) this device must accept any interference received, including interference that may cause undesired operation.

This equipment has been tested and found to comply with the limits for a Class B digital device, pursuant to part 15 of the FCC Rules. These limits are designed to provide reasonable protection against harmful interference in a residential installation. This equipment generates, uses and can radiate radio frequency energy and, if not installed and used in accordance with the instructions, may cause harmful interference to radio communications. However, there is no guarantee that interference will not occur in a particular installation. If this equipment does cause harmful interference to radio or television reception, which can be determined by turning the equipment off and on, the user is encouraged to try to correct the interference by one or more of the following measures:

- Reorient or relocate the receiving antenna.
- Increase the separation between the equipment and receiver.
- Connect the equipment into an outlet on a circuit different from that to which the receiver is connected.
- Consult the dealer or an experienced radio/TV technician for help.

### FCC CAUTIONS

Changes or modifications made to this device that are not expressly approved by ARB Corporation Ltd may void the user's authority to operate the equipment. This device must not be co-located or operated in conjunction with any other antenna or transmitter.

### FCC RADIATION EXPOSURE STATEMENT

This equipment complies with FCC radiation exposure limits set forth for an uncontrolled environment. This equipment should be installed and operated with minimum distance of 20 cm between the radiator and your body.

## ENVIRONMENTAL PROTECTION

---

Waste electrical products should not be disposed of with household waste. Please recycle where facilities exist. Check with your local authority or retailer for recycling advice.
